Hiring Manager
Affirm
Toronto, ON

Dear Hiring Manager,

I am thrilled to apply for the Software Engineer position within Affirm. With a Bachelor's degree in Computer Science from Toronto Metropolitan University and hands-on experience in full-stack development across innovative platforms, I am excited about the opportunity to leverage my expertise in a forward-thinking environment that champions learning and customer-focused solutions.

My journey in computer science has always been fueled by an insatiable curiosity and a passion for building technology that pushes boundaries. This drive has led me to develop impactful projects, from an AI-powered cloud application at Pavo Digital to creating **Rifty.co**, an online community marketplace. My commitment to innovation aligns strongly with Affirm's emphasis on delivering high-quality digital solutions, and I am excited to bring my skills to a team that values excellence and customer focus.

In my previous roles, I have demonstrated a proven ability to quickly adapt to new technologies and frameworks, like Remix, React, and AWS, enabling me to efficiently write testable, scalable, and high-performing code. My experience in working closely with cross-functional teams at CIBC and IMDC Labs has further sharpened my skills in collaborative problem-solving and project management, essential for achieving seamless project delivery.

I am also deeply committed to staying at the forefront of emerging tech trends, such as AI and AR, as they enable me to continuously enhance my technical skill set and build products that resonate with end-users. I bring this same enthusiasm for innovation to my professional work, as seen in my successful implementation of machine learning models and robust backend optimizations.

Joining Affirm represents an exciting opportunity to contribute to a purpose-driven team while continuing to learn and innovate. Thank you for considering my application. I look forward to discussing how my passion for building meaningful digital experiences and my commitment to continuous learning could make a positive impact on Affirm's mission.

Warm regards,
Warren Phillips
